communication device via a communication channel, that receives a signal that includes the first encoded data and the second encoded data and that includes a turbo decoder and a synchronization module that includes a Viterbi decoder, a phase detector, and a voltage controlled oscillator, wherein: the synchronization module is operable to recover a first symbol, a second symbol, and a third symbol from the signal; the first symbol is followed by the second symbol; the second symbol is followed by the third symbol; and the Viterbi decoder operating with a zero traceback depth; and a the turbo decoder that is operable to decode the first symbol, the second symbol, and the third symbol that are provided from the synchronization module to make best estimates of information bits encoded therein, as the applicant has claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
